

Sage 100 Premium Version 2016 Supported Platform Matrix

Created as of November 25, 2015

The information in this document applies to Sage 100 Premium Version 2016. Detailed product update information and support policies can be found on the Sage Support web site at: <https://support.na.sage.com/>. This document is intended to cover information regarding the compatibility of various operating systems with Sage 100 Premium as of November 25, 2015. Any operating system not listed should be considered *incompatible*.

Note: It is critical that before and during an installation, this document be thoroughly reviewed, along with the *Sage 100 Installation and System Administrator's Guide* and other documents found on the How to install Sage 100 and locate installation and upgrade information page. For this Web page log into the Sage Support Web site at: <https://support.na.sage.com/> and in the search field type **18216** and click **Search** button.

If development partner or Extended Solutions customizations or modifications have been made to your Sage 100 Premium software, coordinate with your Sage business partner and your development partner before installing Sage 100 Premium.

For information about Integrated Solutions Compatibility Matrix, logon to the Sage Support website at: <https://support.na.sage.com/> / and refer KB **48274**.
For Sage 100 versions 2016 phone and web case support (retirement) information, refer to KB **31477**.

Web site content can change at any time. Sage has no control over, and cannot be responsible for the content of other companies' Web sites.

If your platform is not listed in the matrices below, it is not supported.

Supported Workstations	Remarks
Windows 10 (32 and 64-bit) Pro and Enterprise	<p>Notes</p> <ul style="list-style-type: none"> • Windows 7 Home Basic and Windows 7 Home Premium editions are not supported.
Windows 8.1(32 and 64-bit) Pro and Enterprise	
Windows 8 (32 and 64-bit) Pro and Enterprise	
Windows 7(32 and 64-bit) Professional, Enterprise, and Ultimate Service Pack 1	

Sage 100 Premium Version 2016 Supported Platform Matrix

Created as of November 25, 2015

Microsoft Dedicated Servers defined as Operating System software specifically designed to be used as a network server (not peer-to-peer).	
Supported Servers	Remarks
<p>Windows Server 2012 R2 (64-bit) Standard</p> <p>Windows Server 2012 (64-bit) Standard</p> <p>Windows Server 2008 R2 (64-bit) Standard and Enterprise Service Pack 1</p>	<p>Notes</p> <ul style="list-style-type: none"> ▪ Sage 100 Premium is a 32-bit application and will run seamlessly on a 64-bit operating system utilizing the WOW64 x86 emulator. ▪ The eBusiness Web Services service can be installed only on a Windows Server platform, such as Windows Server 2008 R2, 2012, 2012 R2. For more information, see the <i>eBusiness Web Services Installation Guide</i> found by clicking the Documentation link on the Sage 100 Premium Autorun window of the install DVD. ▪ Unless absolutely necessary, avoid installing Sage 100 Premium to system controlled folders, such as C:\Program Files or C:\Program Files(x86). Sage recommends installing Sage 100 Premium to a dedicated non-system controlled folder, such as C:\Sage\Sage 100 Premium. ▪ The eBusiness Web Services service can only be installed on a Windows Server platform, such as Windows Server 2008, 2012, 2012 R2. For more information, see the <i>eBusiness Web Services Installation Guide</i> WebServices.pdf found by clicking the Documentations directory of the Sage 100 Premium Autorun screen. <p>Recommendations</p> <ul style="list-style-type: none"> ▪ Sage 100 Premium should be installed on a dedicated member/application server. Although supported, certain Windows server configurations are not recommended due to possible instability and performance issues. Support from Sage Customer Support may be limited in the following circumstances: <ul style="list-style-type: none"> ○ Running Sage 100 Premium on a Windows server acting as an Active Directory domain controller managing a large number of user accounts, computer accounts, group policies, organizational units, remote sites, or other network resources. ○ Running Sage 100 Premium on any server actively running other applications or services, such as e-mail (for example, Exchange Server), IIS, fax programs, or other software.

Sage 100 Premium Version 2016

Supported Platform Matrix

Created as of November 25, 2015

Not Supported

The items listed here are intended to be used for clarification purposes only, and are not intended to represent a comprehensive list of exclusions.

- Running Sage 100 Premium on any Windows Small Business Server operating system – regardless of the number of user and computer accounts it is managing, is not supported. Small Business Server runs Active Directory and Exchange Server by default, and that has been a factor in many reported cases of instability and performance issues. Instability may also result if Small Business Server is further configured to run other applications concurrently, such as IIS, Shared Fax Services, and SQL Server.
- Using a server operating system as a Sage 100 Premium workstation is not supported (not even as a client to another server). However, this configuration can be utilized for testing.
- Sage 100 and Sage CRM Suite were not designed for any version of Windows Datacenter Server and are not supported on this platform.
- Windows Server 2008 – As a result of Microsoft’s decision to no longer trust any code that is signed with a SHA-1 code signing certificate (see [Microsoft Technet Article 32282](#)), beginning in November 2015, Sage 100 began upgrading its product installers to use the more secure SHA-256 certificate. Issues have been reported with SHA-256 certificates on Windows Server 2008 (see [Microsoft KBID 2763674](#)) Note that Windows Sever 2008 R2 is supported.

SageCRM Supported Server	Remarks
<p>Windows Server 2012 R2 (64-bit) Standard</p> <p>Windows Server 2012 (64-bit) Standard</p> <p>Windows Server 2008 R2 (64-bit) Standard and Enterprise Service Pack 1</p>	<p>Notes</p> <ul style="list-style-type: none"> ▪ Microsoft SQL Server is required for Sage CRM Server. ▪ SageCRM 7.3 can be installed on MS SQL Server 2008 R2 and 2012 SP1 Standard and Enterprise editions, SQL 2014 and SQL 2012 SP2. ▪ SageCRM Server cannot be installed on a server running Microsoft Exchange or Lotus Notes Domino. <p>Outlook Plug-In for SageCRM</p> <ul style="list-style-type: none"> ▪ To install CRM Outlook Integration, download the Outlook plug-in from within CRM in the My CRM menu > Preferences tab. The user must be an Administrator or Power User of the client machine to install the Outlook plug-in. ▪ If installing the CRM Outlook Integration in a Terminal Services environment, administrator rights are required on the Terminal Services machine. All instances of Internet Explorer and Outlook must be closed to install the plug-in. At the time of the installation, exclusive access to the server is required for each user. After the plug-in is installed, administrator rights are no longer required. ▪ CRM Outlook client integration is supported only for e-mail accounts running on Microsoft Exchange Server. <p>Not Supported</p> <ul style="list-style-type: none"> ▪ Small Business Server is not supported for Sage CRM.
Sage 100 and Sage CRM Supported MS SQL Servers	Remarks
<p>Microsoft SQL Server 2014 (32 and 64-bit) Standard and Enterprise</p> <p>Microsoft SQL Server 2012 SP2 (32 and 64-bit) Standard and Enterprise</p> <p>Microsoft SQL Server 2008 SP4 (32 and 64-bit) Standard and Enterprise</p> <p>Microsoft SQL Server 2008 R2 SP3 (32 and 64-bit) Standard and Enterprise</p>

Terminal Services/Citrix Servers	Remarks
<p>Windows Server 2012 R2 (64-bit) Standard Terminal Services</p> <p>Windows Server 2012 (64-bit) Standard Terminal Services</p> <p>Windows Server 2008 R2 (64-bit) Standard and Enterprise Terminal Services</p> <p>Citrix XenApp 6.5 Citrix XenApp 7.5 Citrix XenApp 7.6</p>	<p>Notes</p> <ul style="list-style-type: none"> ▪ Windows Server 2008 R2 Remote Desktop Services is a new name for former Terminal Services Service. ▪ Terminal Services or Citrix must be installed on a supported version of Windows. ▪ Installing Sage 100 Premium or Sage CRM Server on the same server as Terminal Services or Citrix is not supported. ▪ Windows thin clients are supported with Terminal Services and Citrix. For more information, refer to www.microsoft.com ▪ For more information on Terminal Services/Citrix, see the Miscellaneous Notes section in this document. <p>SageCRM Notes</p> <ul style="list-style-type: none"> ▪ Running SageCRM through Terminal Services or Citrix is only supported when run through a remote session to the Desktop and not as a Published Application.

Sage 100 Premium Version 2016

Supported Platform Matrix

Created as of November 25, 2015

Virtual Platforms

Notes

- Sage 100 is currently supported on virtual environments where the Virtual Vendor supports the Windows OS that Sage 100 supports.
- All supported Operating Systems listed under the Supported Workstations, Sage 100 Supported Servers and SageCRM Supported Servers sections are supported when hosted on these Citrix virtual platform products.
- Hardware and software requirements (minimum and recommended) for Sage 100 products apply to virtual environments as well.
- Some third party products might not support the same virtualization platforms as Sage 100 products. For verification, please check with the third party vendor.

Sage 100 Premium Version 2016

Supported Platform Matrix

Created as of November 25, 2015

Miscellaneous Notes

1. When running Sage 100 Premium over a local area network (LAN) environment, the ping timings will vary depending on the speed and configuration of the network. Typical ping timings with 1,800 bytes of data should be between 20–30 milliseconds or faster. Unacceptable ping speeds are over 40 milliseconds.
2. In the Sage 100 Premium client/server environment, integrated applications do their processing at the workstation, not at the server. As a result, users may experience performance issues when running integrated applications from remote locations. Some of the applications affected include Crystal Reports.
3. Virtual private network (VPN) and wide area network (WAN) connections should be set up as point-to-point connections, as opposed to Internet connections, for better stability and performance. If an Internet connection is used, ensure the Internet Service Provider (ISP) can provide a guaranteed bandwidth; otherwise, users may experience dropped sessions and lost connections. With any type of low speed WAN connection, for each remote user, select the Low Speed Connection checkbox in User Maintenance.
4. Always re-run Sage 100 Premium Workstation Setup after re-installing or upgrading the Windows operating system, and verify that a default Windows printer is still available and operational.
5. Verify that all hardware involved in running Sage 100 Premium is on Microsoft's Hardware Compatibility List. Incompatible hardware can cause severe data corruption. For more information, refer to the Microsoft Hardware Compatibility List at: <http://www.microsoft.com/whdc/hcl/default.mspx>
6. Sage is committed to supporting future Microsoft operating systems as they are released to market for all Sage 100 Premium modules; however, Sage does not support beta-level operating systems. As new operating system levels are scheduled for general release, Sage will verify their compatibility, and this document will be updated when Sage's evaluations are completed.
7. Using Citrix or Terminal Services is suggested for faster remote printing of Crystal reports over a WAN and virtual private network (VPN)
8. Sage requires a guaranteed minimum bandwidth of 256 Kbps per user for running Sage 100 Premium through a low-speed remote connection. For each user, 512 Kbps or higher is recommended. Select the Low Speed Connection check box in the Sage 100 Premium User Maintenance window.
9. If a VPN connection is used, keep in mind the following:
 - VPN solutions are either software-based, hardware-based (such as a VPN firewall), or a hybrid of both.
 - Software-based VPNs may result in slower connection speeds due to the security overhead of encrypting the data. Hardware-based solutions run faster.
 - Low-speed connections are subject to considerable performance issues when using a software-based VPN. It may cause the connection to have a bandwidth of less than 256 Kbps. For information on guaranteed bandwidth requirements, see miscellaneous note above.

Sage 100 Premium Version 2016

Supported Platform Matrix

Created as of November 25, 2015

10. TCP/IP must be installed and properly configured so that you can ping by computer name and IP address from the workstation to the server. The server must be able to at least ping the workstation by its IP address. You must be able to use the Windows TELNET.EXE utility or equivalent to communicate with the Application Server on a specific port ID and IP address, or on a specific port ID and name from all workstations to the server. If this cannot be done, you must contact your Microsoft support organization. Sage Customer Support cannot assist with this task. For more information on connection requirements, refer to your *Sage 100 Installation and System Administrator's Guide*.
11. The Sage 100 Premium Application Server is a Windows Sockets application that listens on a single port (typically port 10000). You must open this port on your firewall/router so clients can connect to the Application Server properly. The client does not listen back on its own port, so opening ports for clients is not necessary. Also, the Application Server is compatible with Network Address Translation (NAT).
12. If the Sage 100 Premium Application Server is configured to run as a service and you are experiencing connection timed out errors, white screens, hanging, or slow performance, but only after a certain number of Sage 100 Premium users are in the system, review document **20344** on the Sage Online Web site at <https://support.na.sage.com/>. If you are running the Application Server on the desktop instead of running it as a service, the same problem may occur in a very large multi-user environment. If that is the case, review document **20344** on Sage Support web sites.
13. Wireless local area networks (WLANs) are not recommended for desktop or laptop connections, because using a wireless LAN may result in dropped packets and lost connections.
14. The Microsoft Fax Services feature provided with Windows Server 2008 R2, Windows 2012, Windows 2012 R2, Windows 7, Windows 8 and Windows 8.1 are supported only for Paperless Office and batch faxing. For more information, refer to the Integrated Solutions Compatibility Matrix on the Sage Support Web site at: <https://support.na.sage.com/>

Sage 100 Premium Version 2016

Supported Platform Matrix

Created as of November 25, 2015

Recommended Minimum System Configuration			
	Recommended Minimum ¹		
Client Workstation	Processor	Physical Memory (RAM)	Available Memory (RAM) ²
Workstation (client) operating system versions not listed in this document will not be supported with Sage 100 Premium 2016.			
Windows 8.1(32 and 64-bit) Pro and Enterprise	Intel Core 2 Duo	3 GB	512 MB
Windows 8.1(32 and 64-bit) Pro and Enterprise	Intel Core 2 Duo	2 GB	512 MB
Windows 8 (32 and 64-bit) Pro and Enterprise	Intel Core 2 Duo	2 GB	512 MB
Windows 7 (32 and 64-bit) Professional, Enterprise, and Ultimate	Intel Core 2 Duo	2 GB	512 MB
Network Bandwidth	Recommended Minimum		
	100 Base-T – 100 Mbps at Full Duplex		

¹The recommended minimum is designed to ensure that the systems used for Sage 100 Premium are capable of providing adequate performance with a standard complement of normally installed applications, such as virus protection software.

² Regardless of the recommended minimums specified above, users should check the available memory on the workstation prior to installing Sage 100 Premium and use the Windows Task Manager to check the Available Physical Memory on the Performance tab. A minimum of 512 MB of physical RAM should be available to Sage 100 Premium when all other applications that will be used with Sage 100 Premium are loaded. Sage cannot guarantee acceptable performance when running Sage 100 Premium concurrently with other applications that consume system resources required for Sage 100 Premium to perform at an optimum level. Refer to the article “How to determine memory” on the Sage Support Web site at: <https://support.na.sage.com/>

Sage 100 Premium Version 2016 Supported Platform Matrix

Created as of November 25, 2015

Recommended Minimum System Configuration for Sage 100 and SageCRM Servers			
	Recommended Minimum ¹		
Sage 100 and SageCRM Supported Servers	Processor	Memory (RAM)	Additional Requirements
Windows Server 2012 R2 (64-bit) Standard		2 GB + 4-6 MB per concurrent user	100 Mbps network connection
Windows Server 2012 (64-bit) Standard			
Windows Server 2008 R2 (64-bit) Standard and Enterprise			
Terminal Services and Citrix	For 64-bit systems: Intel or AMD 64-bit capable, such as Intel Xeon or Quad-Core AMD Opteron	Memory (RAM)	Additional Requirements
Windows Server 2012 R2 Terminal Services Windows Server 2012 Terminal Services Windows Server 2008 R2 Remote Desktop Services Citrix XenApp 6.5 Citrix XenApp 7.5 Citrix XenApp 7.6		Recommended minimum and as required by Terminal Services or Citrix, plus 128 MB per concurrent user ¹	100 Mbps network connection
Sage 100 and SageCRM Web Servers		For 32-bit systems: Intel Pentium 4 class 2.4 GHz Dual processor recommended	Memory (RAM)
Windows Server 2012 R2 Windows Server 2012		2 GB	Internet Information Services 8.0 & 8.5
Windows Server 2008 R2		Memory (RAM)	Internet Information Services 7.5
E-mail Servers		Memory (RAM)	Additional Requirements
Microsoft Exchange Server 2013 Microsoft Exchange Server 2010		2 GB	100 Mbps network connection

¹ The recommended minimum is designed to ensure the systems used for Sage 100 Premium are capable of providing adequate performance with a standard complement of normally installed applications, such as virus protection software.

² 128 MB is based on an average of three concurrent tasks per user (Sage 100 Premium Desktop plus two additional tasks, such as Sales Order Entry or Customer Maintenance). Averages of more than three concurrent tasks per user will require additional RAM.
