

Storelink System requirements

CommServer System Requirements

The following table lists minimum system requirements for the CommServer PC.

Hardware Description	Minimum Requirement
Operating System	Windows XP (32bit)*, Windows XP Professional, Windows Vista, Windows 7, Windows 7 Professional (XP Mode only), Windows 8, Windows Server 2003 (32bit)* and Windows Server 2008 – 32Bit (must be running a Sage 100 ERP v4.50 or greater-based system) * Latest Service Packs required
Disk Drive	100 GB

Report Server and CommServer must be on the same Domain, not a workgroup.

The CommServer PC will need to be dedicated to the DM2® StoreLink Software System. No other networking files, interfaces, etc. can be served by this PC.

ReportServer System Requirements

The following table lists minimum system requirements for the Report Server.

Hardware Description	Minimum Requirement
Operating System	See Notes Below
Disk Drive	100 GB
Other Software	1 Licensed Copy – SQL Server 2003 Standard or Enterprise Edition or Higher

1. Any version of Microsoft Windows that will support SQL Server 2003/2008 Standard or Advanced Editions may be used on the Reports Server.
2. SQL Server Requires activation in 32 Bit Mode.
3. SQL needs to be installed as the default instance.
4. Report Server and CommServer must be on the same domain, not a workgroup.
5. 1 Licensed copy of SQL Server 2003 Standard or Enterprise Edition or SQL Server 2008 Standard or Enterprise is required for the Reports Server. This license is your responsibility to obtain.

**StoreLink
System
Requirements**

The PC that you will use to run StoreLink must meet certain minimum requirements.

<i>Hardware Description</i>	<i>Minimum Requirement</i>
Operating System	XP Professional, Vista, Windows 7
Printer	DeskJet, LaserJet, or Laser Printer.
Disk Drive	25 GB

6. A modem is not required for locations that will communicate with the Home Office CommServer via direct FTP communications. Modems built directly on to the PC mother-board “on-board modems” are not supported. Modems must be PCI or ISA based, PCI suggested. Modem must be Hayes Accura compatible 56K.
7. Vista and Windows 7 must have UAC disabled.
8. Must be installed on a 32bit system.
9. An Ethernet adapter is not required for locations that will not communicate with the Home Office CommServer via modem dialup communications, AND will not implement a POS interface with a Point of Sale device that utilizes a standard 802.3 Ethernet connection.
10. A combination battery/surge protection device is not required, but highly recommended due to the harsh conditions and “dirty power” that is typical of the environment. Failure to install battery/surge protection can result in hardware failures and/or software corruption requiring reinstallation of the StoreLink software in the event of unexpected power failures or inconsistent power voltages.
11. Depending on the POS and Handheld scanner installations, the appropriate ports need to be available. A USB port needs to be available for the Handheld. POS systems vary, please refer to your POS networking documentation to see what is necessary.
12. Data is stored on the C:\ drive, the disk space needs to be available on that drive.

**StoreLink
Handheld
Scanner
Requirements**

Storelink is compatible with Motorola Symbol handheld scanners running Windows CE 5.0 or later.

Device Compatibility

This software release has been approved for use with the following Motorola Enterprise Mobility devices.

Device	Win CE 5.0	Win CE 6.0	Win Mobile 5.0	Win Mobile 6.0/6.1	Win Mobile 6.5
ES400					*
FX7400	*
