

Business Intelligence Basic Webinar Correction

Please be advised that the CPG (Cost per Gallon) calculation shown during our June 14, 2012 “Business Intelligence Basics” webinar was incorrect. The correct calculation is illustrated below:

The screenshot shows a dialog box titled "Insert Calculated Field". It contains two input fields: "Name:" with the value "CPG" and a dropdown arrow, and "Formula:" with the value "=IF(GMExt <>0,GMExt/ProdGals, 0)".
